CASAMBI

Note!

Different materials affect Casambi Mesh signals in various ways:

- **Metal:** Blocks or weakens signals significantly.
- **Concrete, Brick:** Reduce signal range.
- **Wood, Glass, Plastic:** Minimal impact.

Proper placement is vital for strong signals, avoiding obstructions like metal and dense walls to ensure reliable connectivity. Care to check signal levels.

For optimal performance, we recommend maintaining an approximate distance of 20meters between Casambi devices under good conditions. This helps ensure strong and reliable connectivity.
